

The Australian Canine Snakebite Survey

Have you ever treated a dog with snake envenomation?

Here is your chance to contribute to our knowledge on this interesting topic!
It only takes 5-15 minutes.

The University of Sydney is conducting an anonymous survey designed to investigate the current practices in the diagnosis and treatment of canine snakebite patients across Australia, with a focus on the number of vials of antivenom being used, the decision-making surrounding this and any adverse events. It is open to any veterinarian in Australia who has been involved with snake envenomation in dogs.

You may open the survey in your web browser by clicking the link below:
